

## PJE couplings for CRN

Materials in contact with the pumped liquid are made of stainless steel EN 1.4401 (≈AISI 316) and rubber.

A set consists of two coupling halves (Victaulic type 77), one gasket, one pipe stub (for welding or threaded), bolts and nuts.

| Pump type | Pipe stub   | Maximum pressure [bar] | A [mm] | B [mm] | Pipe connection | Rubber parts | Number of coupling sets required | Product number | Coupling                                                                            |
|-----------|-------------|------------------------|--------|--------|-----------------|--------------|----------------------------------|----------------|-------------------------------------------------------------------------------------|
| CRN 1s    | Threaded    | 69                     | 50     | 320    | R 1 1/4         | EPDM         | 2                                | 419911         |  |
| CRN 1     |             |                        |        |        |                 | FKM          | 2                                | 419905         |                                                                                     |
| CRN 3     | For welding | 69                     | 50     | 280    | DN 32           | EPDM         | 2                                | 419912         |                                                                                     |
